**INTERVIEW SUMMARY**

Applicants thank the Examiner for the interview held on November 29, 2006 regarding the patentability of the current invention. During the interview, Applicants' representative pointed out the invention features of the invention and reasoned that the references do not anticipate the present invention as currently amended.

In response, the Examiner was persuaded that our invention is not anticipated by the Pittner '049 reference or the Mukhopadhyay '255 reference. However, he also took the position that the Dyke '050 reference still reads on the present invention.

The Examiner was helpful in stating that he will recommend certain suggestions in his Interview Summary to further define the features of the present invention over the Dyke '050 reference in a language acceptable to the Patent Office.

It is Applicants' position that the above summary describes the detail of the interview held on November 29, 2006. If there are any further important details which have been omitted by the above summary, Applicants invite the Examiner to provide additional details as well. Applicants' representative also thanks the Examiner for his cordial interview and helpful assistance in prosecuting this Application.

Respectfully submitted,

A handwritten signature, likely of Darren Kang, is enclosed within an oval. The signature is stylized and appears to be a combination of initials and a surname.
